

A B S T R A C T

A METHOD AND A SYSTEM FOR CAPTURING A WIDE-FIELD IMAGE
AND A REGION OF INTEREST THEREOF

5

This system captures an image acquired by a simply
connected wide-field optical system (1) providing a first
optical channel, this image being captured by a first
video camera. A sampling optical system inserted into
10 this first channel captures on a second video camera a
narrow field corresponding to a region of interest of the
wide field.
